

ClinPhone® Compact

Rapid deployment, high quality

Key features

- **Ready-made randomization and trial supply management solution**
- **Delivered on our leading robust platform, providing IVR and IWR functionality**
- **Study-specific customization**
- **Multilingual capabilities**
- **Rapidly deployed and highly cost effective**
- **Simple and quick study specification process**
- **Global coverage**
- **Emergency code break**
- **24/7/365 toll-free availability**

Ready-Made Solution

The clinical trials industry is becoming more and more reliant on the use of technology to accelerate and simplify processes. Increasingly, biopharmaceutical companies are realizing the benefits of using automated randomization and trial supply management to simplify the clinical supply chain, maintain sufficient supplies at sites and save costs by reducing the quantity of medication wasted.

Although each clinical trial is unique, not every study requires the customized approach offered by our ClinPhone® RTSM (Randomization and Trial Supply Management) solutions. Some studies are simpler in design and technical requirements and these studies can benefit from the Compact approach. We have harnessed our unrivaled knowledge and experience accumulated from more than 2,800 clinical trials to design and develop ClinPhone® Compact.

ClinPhone Compact is a validated, pre-built solution which meets the needs of many clinical trials. Because it is ready-made, we can create and test your study application in rapid timelines without sacrificing the quality, robustness and support inherent in Perceptive Informatics' serviced applications.

Our Service

Using ClinPhone Compact, you will benefit from accelerated timelines, less work for your study teams and increased cost effectiveness. You receive all of these benefits with no reduction in the service level you expect from Perceptive's leading technology applications.

ClinPhone® Compact

With ClinPhone Compact you will enjoy:

- Dedicated project management for the duration of your study
- Full 24/7 in-house help desk support
- Perceptive's unrivaled global toll-free access
- The reassurance of utilizing the market leading robust ClinPhone IVR/IWR platform

Why use any other vendor?

The ClinPhone Compact Solution

Based upon the requirements of over 2,800 clinical trials, ClinPhone Compact is designed to meet the needs of many conventional study designs.

Our pre-built validated system enables IVR/IWR Randomization and Trial Supply Management applications to be created with minimal programming and testing—bringing increased simplicity, lower costs and reduced timelines to our clients.

Simply choose from the selection of IVR/IWR functions available to meet the requirements of your study.

Find out today if your study can benefit from the power of ClinPhone Compact.
