

ClinPhone® Drug Accountability

Can you account for all of your supplies?

Key features

- **Electronic management and reporting of drug accountability, reconciliation, returns and destruction**
- **Integration with the ClinPhone® IVR/IWR Trial Supply Management databases**
- **Electronic dispensing and return logs**
- **Downloadable data for offline use by monitors**
- **Coordination of medication returns to distribution depots**
- **Capture of destruction confirmation**
- **Tracking of entire medication supply chain**

Total Supply Chain Management

Together with our automated Trial Supply Management services, ClinPhone® Drug Accountability enables management of the entire clinical supply chain. It allows sponsors to create and maintain electronic documentation of drug accountability, reconciliation, returns and destruction processes. This facilitates management and tracking of clinical supplies including medication receipt at depots and sites, dispensation to subjects, receipt of returned medication from subjects, medication returns to depots and confirmation of ultimate destruction. As a result, you have reliable evidence of the life cycle for every medication unit involved in your study and complete end-of-study documentation.

Key Benefits

- Full visibility of chain of custody for investigational medicinal product
- Centralized management of drug accountability and reconciliation processes
- Minimized paper-based operations

- Improved data integrity and quality
- Real-time access to accurate data for study leaders, monitors and site personnel
- Early identification and resolution of discrepancies
- Enhanced regulatory compliance and reduced audit findings

Process Management

For clinical trials, it is necessary to ensure that all investigational materials are properly accounted for and reconciled throughout the study life cycle from depot to destruction. ClinPhone Drug Accountability offers a complete electronic solution for managing drug accountability, reconciliation, returns and destruction activities by capturing and integrating data from site, monitor and distribution depot users.

ClinPhone® Drug Accountability

For **study leaders**, it enables:

- Real-time global view of investigational drug accountability
- Automated documentation eliminating errors and legibility difficulties inherent in paper-based records

For **site personnel**, it enables:

- Electronic logging of dispensations and returns
- Streamlined workflow mirroring current process

For **monitoring personnel**, it provides:

- Easy access to accurate site-specific medication logs to perform drug reconciliation activities
- Electronic online and offline capabilities to complete drug reconciliation at sites
- Easy management of medication returns from sites

For **depot or local distribution users**, it allows:

- Receipt verification of shipments from sites
- Easy management and recording of destruction process
- Depot-level reconciliation activities
