

# ClinPhone® Supplies Administration

## Do you have full control of your supplies?

### Key features

- User friendly, multi-lingual web application
- Expiry date management for site and depot supplies
- Supply strategy adjustments including adoption of new strategies
- Transfer of supplies between depots and/or sites
- Management of qualified person (QP) release and inventory release processes
- Management of supplies status across entire supply chain
- Management of supplies even before study goes live

### Extended Supply Management Functionality

At Perceptive Informatics, we recognize the clinical supply team's need for extended supply management functionality to fully control and manage their trial supplies. As a result, ClinPhone® Supplies Administration has been specifically designed to provide users increased, active control over their trial supply management. The solution is comprised of a number of highly configurable, validated web-based modules to facilitate the full range of supply activities including inventory release, expiry date management, supplies transfer and QP release.

### Optimal Control and Flexibility

The application provides sponsors with utmost flexibility and convenience. Users can manually transfer stock between depots or sites, override pack status and change site supply strategies through an intuitive interface. The ability to tightly control supplies and rapidly respond to emerging situations helps supply personnel overcome any specific challenges experienced

in the supply chain. The functionality will empower the clinical supplies team to take full control of their supply management and harness the true value of RTSM (Randomization and Trial Supply Management). In particular the functionality can be valuable for studies with planned mid-study production, planned additional countries or where medication expiry or stability issues exist.

### Key Benefits

- Enables users to play a proactive role in supply management
- Enables users to optimize the use of study supplies
- Empowers users with full control and responsibility for all supply activities
- Ability to rapidly respond to emergencies where medication needs to be immediately withdrawn or replaced
- Total visibility into QP release status to enhance management of this complex process across multiple countries
- Eliminates the need for manual requests minimizing errors or delays

## ClinPhone® Supplies Administration

### Robust Suite of Supply Management Solutions

As an industry-leading provider of trial supply management solutions, Perceptive is focused on developing innovative and business process-driven tools to meet the needs of trial supply teams. In addition to ClinPhone Supplies Administration, our suite of trial management solutions specifically focused on empowering the clinical supply personnel includes:

- ClinPhone® Trial Supply Management: Centralized, automated management of trial supplies powered by industry-leading IVR/IWR platforms
- ClinPhone® MedSim: State-of-the-art trial supplies simulation and forecasting to answer key clinical supply chain questions using sophisticated modeling techniques
- RTSM Dashboard: A module of the powerful RTSM Reporting Solution, the RTSM Dashboard offers advanced supplies utilization forecasting and medication management reporting capabilities in graphical display formats for rapid data interpretation
- ClinPhone® Drug Accountability: Electronic management and reporting of the entire drug accountability, reconciliation, returns and destruction process
