

# Perceptive Portal™

## Building trial communities

### Key features

- **Secure enterprise Portal providing a valuable trial management workspace**
- **Built-in data integration with DataLabs® EDC, ClinPhone® RTSM (Randomization and Trial Supply Management), IMPACT® and TrialWorks® CTMS, Medical Imaging and ePRO, with the ability to access and report data from other third-party solutions**
- **View aggregated information across systems for strategic decision making at a trial, program and portfolio-level**
- **Experienced Portal implementation team to provide additional custom functionality**

### Standard and Configurable Functionality

**Clinical Trial Metrics**—View up-to-date trial performance and operational metrics pulled from CTMS, EDC, RTSM, Medical Imaging, ePRO and other clinical systems to provide valuable insight into country, site and patient recruitment; data collection and management; and medication supplies status

**My Applications**—Provides links to access the technology solutions in play, including DataLabs, ClinPhone RTSM, IMPACT or TrialWorks, Medical Imaging, ePRO and third-party applications

**Document Repository**—Post and access the latest version of essential study documents such as the study protocol and amendments

**Document Collaboration**—Enables defined users to share and collaborate on the creation and approval of study documents with full version control and publishing functionalities including “check in” and “check out” capabilities

**Study Announcements**—Publish and share study updates and announcements

**My Forums**—Open discussion areas for defined users to discuss the study and its conduct

**Training**—Contains the latest user manuals and training guides relevant to the study and facilitates site-specific investigator training and the eCertification process

### Key Benefits

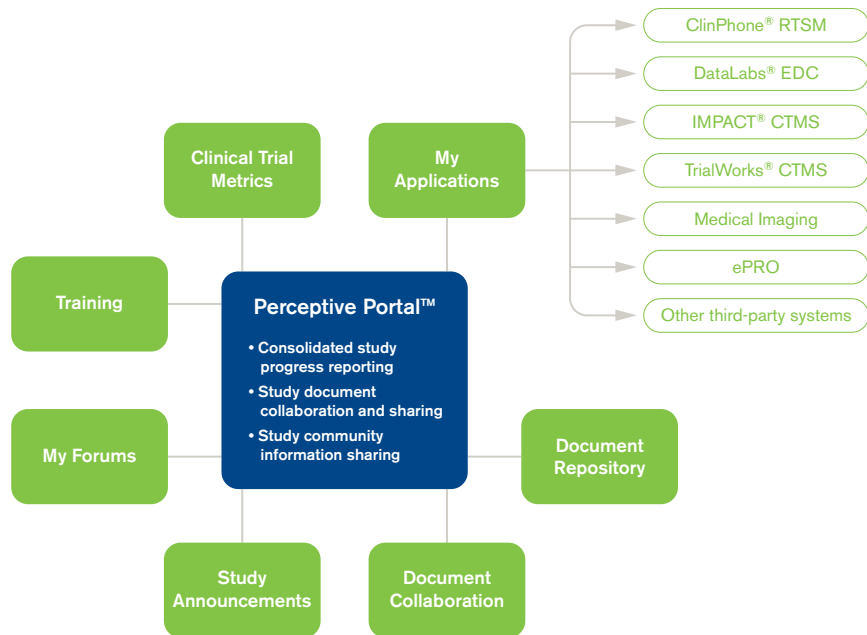

- Consolidated metrics presenting a consistent “single view” of data from across multiple applications enabling timely and informed decision making
- Centralized location for gathering, organizing and disseminating accurate and cohesive information to many, dispersed individuals and teams across the globe
- Improved workflow across the entire study community as sponsor and CRO users collaborate together centrally in creating study documentation
- Ensures all study users have access to the most up-to-date study documents and training materials
- Promotes teamwork and sharing of best practices amongst the whole study community including monitors and site personnel
- Easy-to-use through simple and intuitive navigation

## Perceptive Portal™

### See the Full Picture

Planning and managing a clinical trial is a complex task involving many different people, processes and systems. It can be challenging to ensure everyone involved in the trial has all of the appropriate information and latest documentation in a timely manner to perform their respective activities and make decisions. Furthermore, answering study management questions can be time-consuming and frustrating when the retrieving and combining of data from the different systems used in a clinical trial is needed to see the full picture. At Perceptive Informatics, we see real value in providing solutions that make this easy and provide trial communities with a central place to access key study information and documentation, as well as share best practices.

Perceptive Portal™ solves these issues by providing an intelligent, centralized place for integrating the information, processes and people involved in the conduct of a trial. Built by our experienced team of Portal experts, our solution surfaces all the trial-related materials individual users need in a simple and intuitive framework. Built-in integration with Perceptive's leading solutions and other third-party applications enables the calculation and display of vital trial metrics, ensuring study management has accurate data to enable effective decision making. Study forums and announcements enable users to share and access relevant study materials, communicate with other users and be part of a strong and productive study community.

### A Vital Piece of Your Technology Suite

The enterprise Portal from Perceptive is one important component of our eClinical Suite designed to simplify the use of multiple technologies used in today's clinical trials. Our solution suite comprises:

- **ClinPhone RTSM** for centralized randomization and trial supply management
- **DataLabs EDC** for effective data collection and management
- **IMPACT and TrialWorks CTMS** applications for informed study and program management

- **Perceptive Portal** for consolidated study progress reporting, study document collaboration and sharing, and study community information sharing.

Our solutions are developed to simplify workflow for the site and sponsor users by bringing both data integration and solution interoperability. Underpinned by our unique, sophisticated Clinical Technology Integration Platform (CTIP), Perceptive is able to provide the true meaning of eClinical.
