

Capture Hematology Imaging Biomarkers with Confidence

Hematology clinical trials are particularly complex, as they require both imaging and a comprehensive review of clinical data, leading to very quick deliverable timeline expectations. Perceptive's operational strength and scientific knowledge meet the challenge head-on.

We have supported over 360 hematology studies across a wide range of indications including malignant and non-malignant conditions such as sickle cell disease. For hematologic malignancies, we have vast expertise across criteria, including:

► Lugano ► Lyric ► IMWG ► RECIL ► IWCLL ► IPNHLSS ► IWWM ► TMTV

Why choose Perceptive Imaging

Proven ability to deliver on tight timelines with uncompromised data quality

Success story: Delivered 1,200+ radiology and 1,500+ oncology reads for a multiple myeloma trial, achieving critical milestones on aggressive timelines. Breakthrough Therapy Designation granted and now FDA and EMA approved.

Extensive experience in hematology trials with global regulatory approvals

Our team has supported over **360 malignant and non-malignant hematology trials**, contributing to **69 regulatory approvals** and **17 Breakthrough Therapy designations**.

Broad KOL network featuring renowned advisors and internal experts

Perceptive's approach connects sponsors to a network of leading KOLs, including Bruce Cheson, MD, Shaji Kumar, MD, and Joseph Mikhael, MD, as well as our internal hematology experts.

Expert protocol consultation

We design our approach to capture all essential imaging and clinical details from the start, supporting analysis, biomarkers, and efficacy endpoints with regulatory confidence.

24/7 support for seamless communication and issue resolution

Close collaboration with sponsors and globally positioned teams keeps trials moving forward, with rapid escalations ensuring efficient and successful outcomes.

Meet our Hematology Experts

Meet Perceptive's internal hematology experts, whose deep clinical and imaging expertise supports every phase of your hematology trial, from protocol design to regulatory success.
